

TEAM 2

Team 2 is working on a inventory app.

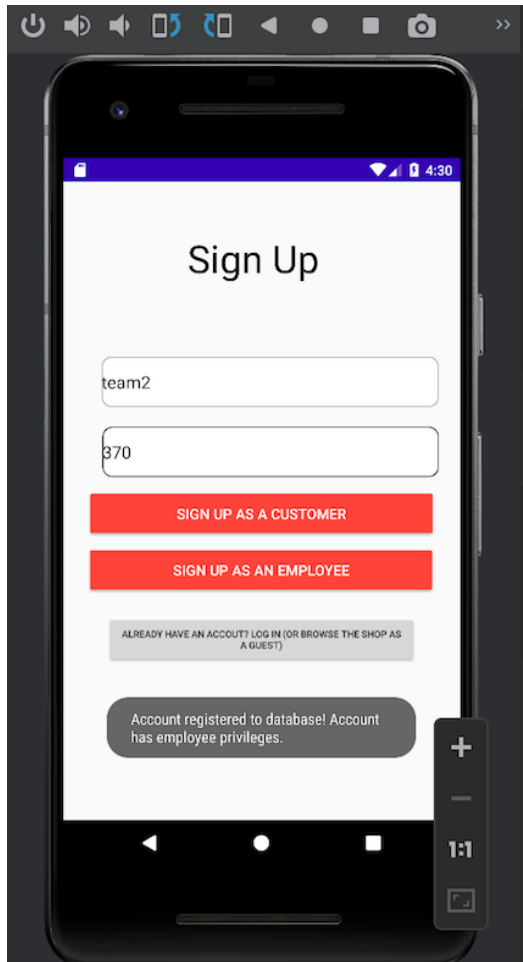

Current plan: We are working on UI design, coding and every aspect to build the app. Here is the partial version output of our app which is not the final. We are still working on projecting more features on it.

Future plan: We will have a good app with accuracy, functional, bug free and user-friendly inventory app.

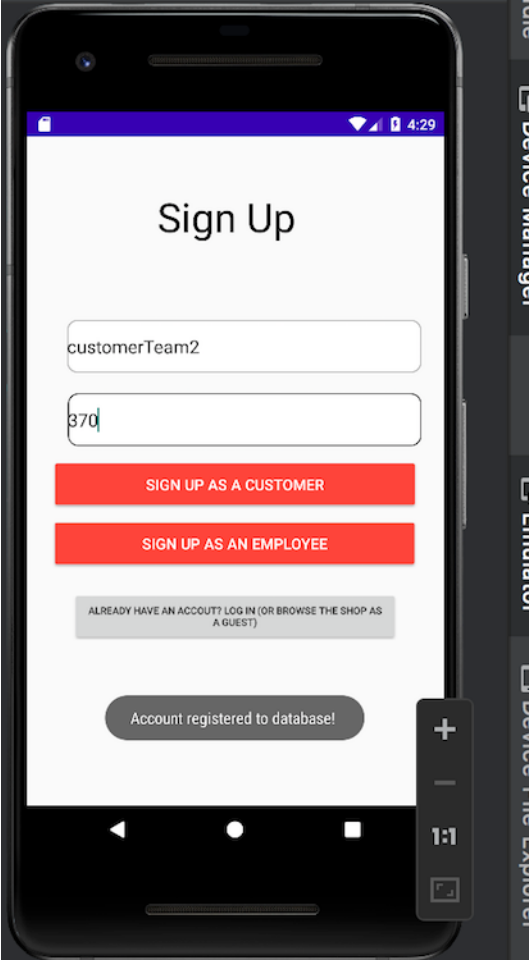

signing up as a new user: When we provide a username and a password, it is registered into a database. So, we can log in app later.

OUTPUT

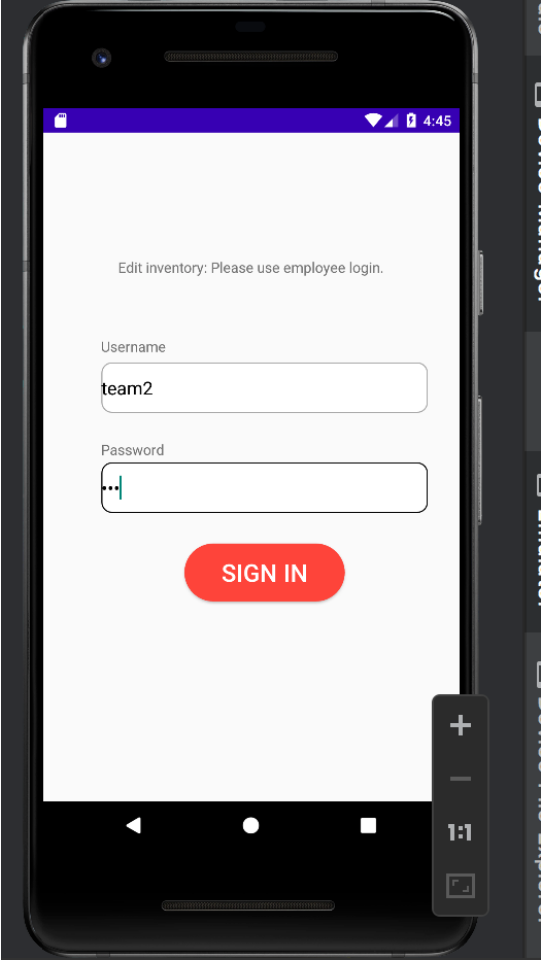

Output: registered account in databse

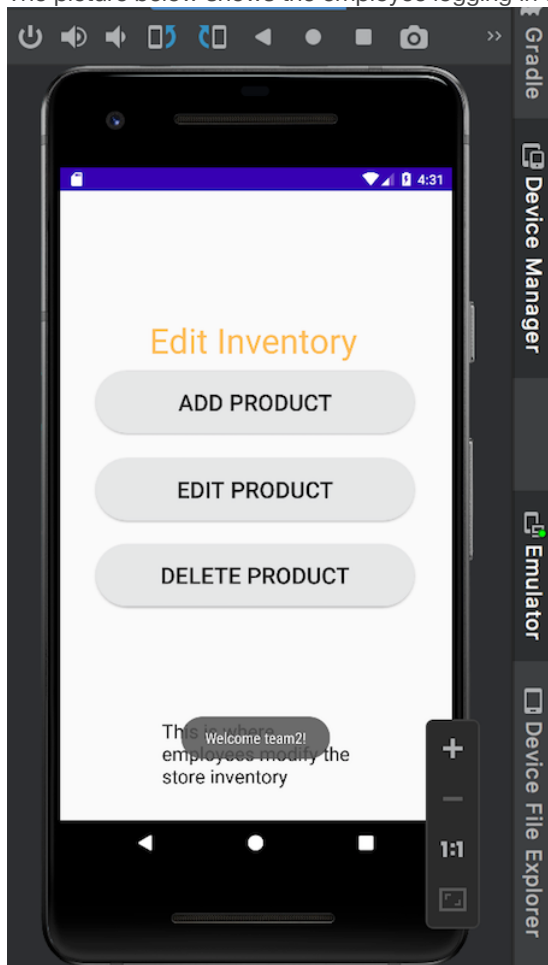

Logging in: After we have already signed in we have to login which takes us to login page which is shown below.

- **Edit inventory** is only for Employee to log in.
- Likewise, **Shop/browse** is only for customer.

The picture below shows the employee logging in to make add, edit or delete product.

customer signing in.
